Left: Glass on the three enclosed sides of the shower area brings the outdoors in, while still maintaining privacy.

Above: The clean lines and minimalist hardware on the vanity cabinet are in keeping with the overall aesthetic of the master suite. Rift-sawn white oak was used here, echoing the geometric paneled design of the headboard in the master bedroom.

Rugged character

Appealing to the eye and to the touch, concrete sinks offer much more than enduring strength – J Aaron Cast Stone has a range of options

Long favored for its construction strengths, concrete has stepped out of the shadows of industrial applications and into the limelight of decor. Offered in a variety of hues, aggregates, shapes and finishes, concrete has come of age.

J Aaron Cast Stone creates an array of concrete counters, farmhouse sinks, vanities and fireplace surrounds, says owner Joshua Johnson.

“While we have a wide selection of products available, much of our work is custom designed for clients,” says Johnson. “Concrete offers a practical, attractive design solution.

“In the past, concrete’s tendency to absorb

stains has held it back from mainstream design popularity – however, we have created a new impregnated sealant which avoids marks while leaving the tactile nature of the concrete intact.”

The result is a versatile, mark-free surface available from J Aaron Cast Stone in every shade and texture imaginable – and an interesting alternative to natural stone surfaces. J Aaron also offers wood countertops.

For further information, contact J Aaron Cast Stone, phone (404) 298 4200. Email: joshua@jaaroncaststone.com. Alternatively, visit the website: www.jaaroncaststone.com.

Facing page: This one-of-a-kind concrete vanity trough was designed by Michael Peacock and created by J Aaron Cast Stone. Treated to avoid staining and left with a rough finish to further the rustic aesthetic of the bathroom, the vanity is strong, easy to maintain and practical.

Above: This solid, clean-lined washing trough is in treated concrete that ensures it will never stain. The custom piece was designed in a yellow hue with a pebble backsplash.
