### Acoustic underlayment for wood flooring

Insulation acoustic underlayment for glue-down or nail-down hardwood and engineered wood floors is said to dampen impact noise and decrease airborne sounds. The roll-out fiber underlayment is made from 100% pre-consumer recycled textile content. Randomly air-laid filaments create a capillary effect to cushion the floor and absorb impact sound. The 1/8-in. thickness helps smooth small subfloor imperfections. The material is available in 360- and 100-sq.-ft. rolls.

### Waterproof panels

Waterproof panels are said to be unaffected by moisture, tough, easy to clean, and resistant to mold, mildew, and bacteria. Other applications include impact protection for wainscoting and kick plates in areas subject to abuse or heavy traffic. Available in a range of finishes, including HPL, faux stone and marble, veneers, and decorative laminates, the panels include thicknesses from 0.60 to 0.50 in.

### Digital-image column covers

Digital Imagery column covers use metal-surfacing material to integrate the visuals of a photograph or abstract art with the textural grains of the company's metals for a multi-layered effect. Images are printed on solid-core or perforated aluminum and are available in round, oval, square, or rectangle shapes. Two, three, or four segments can be specified, and columns can be installed in exterior or interior applications.

## Growth at Southern Adventist University made easier by Aquatherm

**SOUTHERN  
ADVENTIST UNIVERSITY**

### we've got a pipe for that

The SAU team had a diverse list of needs when renovating some campus buildings to accommodate their growing student body.

They specified Aquatherm. Connected by a virtually leak-free heat fusion method, Aquatherm's Polypropylene-Random (PP-R) systems are rust and hard water resistant.

For the complete SAU case study and more information on Aquatherm PP-R piping systems, call or visit our website today.
