Geothermal/water-sourced heat pumps

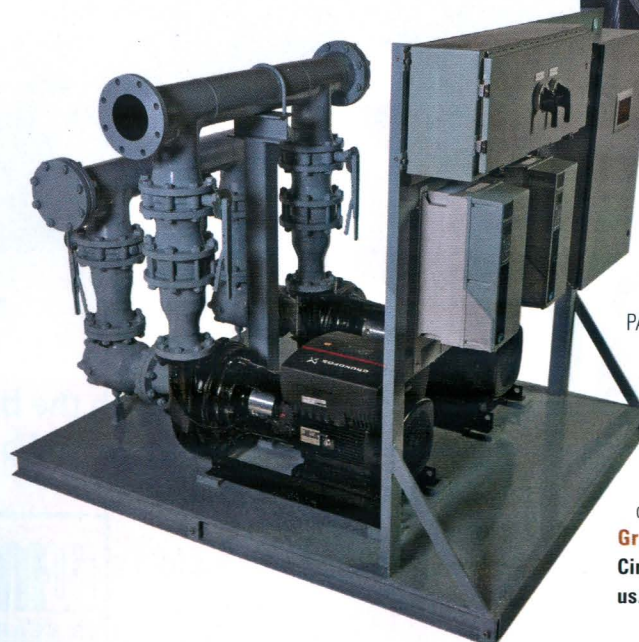

The company's geothermal and water-sourced heat-pump systems are AHRI Certified. The products offer an enhanced control platform said to provide quick start up, easy safety device wiring, and multiple inputs and outputs. The line includes water-to-water, water-to-air, and split unit/air-handling systems, all using R410A refrigerant.

Wall-mounted vanity sinks

Wall-mounted vanity sinks have a sink bowl integrated with the vanity. Available in two models, space is provided on the vanity top for faucet mounting. Bowl placement can be specified either right or left. Both models have angled fronts that taper in on a slant with a built-in recessed storage area.

Integrated package system

PACOpaQ is a fully integrated and compact HVAC packaged pumping system for applications including chilled and hot water distribution, condenser water, geothermal loop, and district heating and cooling. The systems pairs centrifugal pumps with dedicated HVAC control which automatically determines the most efficient speed and optimum number of pumps needed to meet desired flow and pressure. The system offers multiple configurations with as many as four pumps in parallel.
