Budget-friendly task chair

The Itsa chair supports designers' need for a sleek, affordable, and versatile task chair that adjusts to fit nearly every user's ergonomic needs. With two base models, the chair offers a choice of a rounded or square seat with height-adjustable arms, synchro-tilt or knee-tilt control, black mid-back mesh, and black polyurethane base with 55-millimeter casters. An optional seat slider is available. The wide selection of features allows the chair to fit petite and tall users and everyone in between. Five seat color choices—black, burgundy, navy, charcoal, and sand—can be available in as few as five days. Upholstery or leather options can be specified for standard lead times. The chair is certified by Scientific Certification Systems Indoor Advantage and the American National Standard Institute/Business and Institutional Furniture Manufacturer's Association.

Sleek occasional tables

The CG_1 occasional-table collection offers designers an iconic modern expression and a platform for comprehensive material choice. With an archetypal shape that seems effortless, unprecedented material options, and a unique leg detail, the tables can be specified to get noticed or harmonize with the surroundings. They easily integrate in lounges, lobbies, informal meeting rooms, and enclaves. The tables are available in square or rectangular forms in heights of 14 inches and 19 inches.

Stone-look glass

PIX Earth collection is a series of laminated glass patterns that has the visual appearance of stone but greater flexibility in design, offering many advantages over natural stone. Designers and architects can create larger panels than would be possible with natural stone (as large as 96 inches by 180 inches.) The panels are much lighter in weight than stone and can be installed using typical glass systems. As a glass product, the beauty of the stone image can be further enhanced with back lighting or a matte finish on the surface. Applications include exterior cladding, interiors, and furniture, as well as situations where weight is critical, such as in elevator cabs.

Green onyx sink

The Cobblestone green onyx bath sink sparkles in hospitality settings with translucent layers of rich, green onyx. Each sink is crafted by a master stonemason who hollows out a centuries-old cobblestone and then adheres onyx chips to the bowl in an artful mosaic pattern. Each unique sink measures about 16 inches by 16 inches. Bowl dimensions are 14 inches by 14 inches by 5 1/2 inches deep with a sink weighing about 90 pounds.

Contemporary floral tile

Praised for its natural beauty and showy burst of large blooms, the chrysanthemum symbolizes happiness and is the inspiration for an innovative product in the company's Perlamarmi collection. The Chrysanthemum tile is a dazzling stone and natural-rivershell water-jet-cut mosaic, that allows precisely cut organic shapes that fit together seamlessly for a striking continuous look. The tile features petals of polished Calacatta Gold marble paired with white, natural rivershell inserts.

Food-oriented kitchen door

The Culinaria door for kitchens and dining rooms is inscribed with multi-lingual culinary terms such as Soufflé, Salz & Pfeffer, Balsamico, and Herbs de Provence as a celebration of the international art of cooking and the love of food. Culinary-derived text is sandblasted onto clear- or frosted-glass doors, which feature sliding barn-door hardware or a pull-down lever handle and customizable frame and hinges. Custom sizes are available.

Glass staircases

Glass staircases have a textured finish that provides a safe, slip-resistant surface. According to the company, the glass is as durable as natural stone, while able to shine and refract light with a luminescent quality. Each design becomes a work of art. The staircases have smooth, polished edges with no visible lines. A wide variety of organic textures, colors, and edge treatments is available. Products may be curved, straight, or spiral, and may be made entirely of glass or accented with a few glass steps. LED lighting can be imbedded in the steps to provide the entire staircase with a soft glow.

Glass staircases:

- Slip-resistant surface
- Durable
- Variety of configurations and textures; can be LED lit

Recycled-denim insulation

Cotton Armor insulation is produced from 85% recycled denim and cotton fibers to provide reportedly excellent STC ratings. According to the company, an R-13 Cotton Armor blanket-insulated wall has an STC of 52, equivalent to 12 inches of cement. The insulation is safe to handle, easy to install, and has no VOCs. The product can contribute to LEED credits.

Recycled-limestone tile

Salto's Unica recycled-limestone tile uses 80% recycled content. It is California Section 1350 compliant and the adhesive has 20% post-consumer recycled content and zero VOCs. Just as no two pieces of limestone look the same, no two tiles look exactly the same.

Color selections

Color Stories palette includes 240 hues. According to the company, the colors have a greater clarity, purity, and are richer than conventional colors because they are formulated with more pigments in precise, exacting amounts. No black or gray tints are used. Lighting interacts with the paint to produce a visual dynamic. The paints are low VOC and include colors within eight divisions, including Earthen Hues, Fluid Blues, and Golden Fields.

Wood-look porcelain

Treverk porcelain tile uses digital-print technology to provide the look of natural wood. Durable and slip resistant, the tile needs no waxing or stripping. The tile is available in three plank formats of 6, 8, and 12 inches, each by 48 inches, and in six wood tones. The tile can contribute to LEED credits.
