TOTO's illuminated Neorest II basin has an embedded LED light to give off a sense of washing in the moonlight. The body of its high-efficiency faucet component is a nod to a sword's blade, while the basin draws inspiration from the small pool of water seen forming within a melting sheet of ice.

Fire Line Automatic

After many months of extensive efforts, Planika USA has launched the Fire Line Automatic. This remote controlled and certified unit is now the most sophisticated, vent less, linear burner on the market. Numerous sensors ensure the Fire Line Automatic is safe, reliable and maintenance free. The Fire Line Automatic is designed primarily for architects, builders and interior designers and can be mounted into a wall, onto a shelf, used as a see-through or free-standing fireplace. Installation: no chimney, or hard connections needed, connected only to a power supply, no assembly required, optional steel casing.
