Technology in the Classroom

The gunmetal characteristics and bluish-gray tint of **California Faucets'** new Graphite (PVD) decorative finish lend a rustic, earth-metal feel in a traditional setting, while its industrial-contemporary undertones also speak to sleek, modern designs. Graphite is incredibly durable and tamish-proof as a result of the eco-friendly physical vapor deposition (PVD) process, which infuses color by molecularly bonding the finish to the faucet, making it three to eight times harder than chrome.

Developed to make the drain "disappear" to the eye, the TIF Series by **Infinity Drain** is a genuine innovation in commercial drain design, melding a tile or solid surface insert with optimum functionality to create an aesthetically pleasing solution. Offered in a width of 2 1/4" and in varying lengths, it is available with either a stainless steel or PVC channel.

# Kitchen+ BATH

**Xylem's** REFLEX™ Architectural Glass sinks are fashioned from a fusion of glass and metallic foils and stone, making them both stain- and crack-resistant. Offered in a choice of textures and colors—from metallic, ranging from copper to silver, to textured prints, such as exotic Aztec and soothing Blue Copper Swirl—REFLEX is ideal for creating a compelling powder room or soothing bath sanctuary.

**Novellini's** newest multi-functional shower panel is aptly named Glamm because of its striking modern lines and fashion-forward design aesthetic. Pair them side-by-side to create a striking focal point as well as a wellness retreat that promotes relaxation and reconnection. Available in white, white oak and teak finishes, the panels may be used in a wide array of configurations to suit any bathroom floor plan.

**Delta Faucet's** new Proximity™ Sensing Technology enables easy operation of the Arzo (shown) and Grail faucets by forming a 4" field around the body of the faucet. When the user's hand enters the field, the faucet turns on. When the user removes their hands, the faucet turns off within two seconds. The designs, free of optics and infrared, are easy to maintain due to their clean lines and are able to fit into a variety of spaces.

The Toulouse double-ended bateau-style bath from **Victoria + Albert** is ideal for both traditional and contemporary bathrooms. Made of QUARRYCAST, a blend of finely ground volcanic limestone and resin, the Toulouse is naturally white and easy to clean. Thanks to the natural insulation and durability of volcanic limestone, this tub will keep bath water hot, and will not creak or flex.

The SieMatic 6006, a striking new kitchen design from **SieMatic**, includes the company's signature integrated stainless steel grip channel, which provides ease of use while underscoring its defined lines. Base cabinet side panels are brought to a curve at the floor for an elegant design contrast, while the floating shelf overhead reinforces the minimalist theme, keeping with the curved design of the base cabinet at its underside.

**Duravit** introduces Cassia, a flexible new series of built-in ceramic kitchen sinks. Designed by award-winning Phoenix Design, Cassia

sinks are all crafted in DuraCeram®, Duravit's proprietary ceramic recognized for its high impact resistance and optimum robustness for tough kitchen use. Featuring both sculptural and soft forms, the collection is available in three reversible sizes and five colors.
