# GREENING STEAM

How to Bring 19<sup>th</sup>-Century Heating Systems into the 21<sup>st</sup> Century (and save lots of green!)

By Dan Holohan

"When you've read every word that Dan Holohan has written over the past 30 years, you've got to wonder, "What new things can be in this book?" I hesitated to plunk down the \$30. But Dan's a good guy and his writing is always amusing, interesting and informative. So I figured even if I can get two out of three, it's worth the price.

*Amusing, entertaining, light hearted and informative.*

"Of course one new morsel of information would pay for the book many times over.

"I wasn't disappointed. First of all, "Green" refers to the money saved as well as the fuel saved by operating an efficient system.

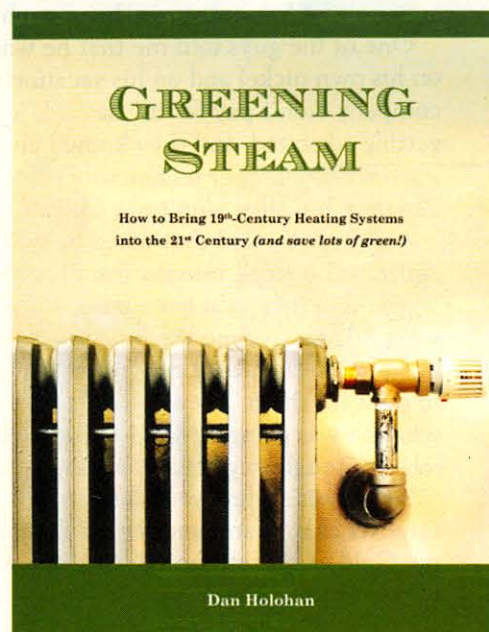

"This is Dan's first book written in the age of the Internet, and it contains all sorts of collaborative knowledge gleaned from "The Wall" by some of the best in the field of steam heating. Holohan was one of the Internet's pioneers, and this new publication so clearly illustrates the benefits that Internet technology brings to knowledge.

"The apple doesn't fall far from the tree, and the book's designer, Erin Holohan Haskell, that little lass we read of over a score an a half years, has produced the most attractive book in Dan's series. It still says Holohan all over it. Amusing, entertaining, light hearted and informative.

"This is one book even the most experienced steam heating engineer will be glad he bought. Thanks, Dan."
