Wetroom system

Culnat's Wyng Wetroom System is comprised of the Showlet, an all-in-one shower and toilet combination, and the Shower Wall-Rail system, a mounted rail system that allows space under the rail to safely turn a wheelchair around. They can be used separately or together, complemented by the shower units, pans and safety handrails. The no-leak Culwell Flange makes it all possible by sealing directly to the toilet and the floor. Spaces, as small as 5' x 7', can be converted into full wheelchair-accessible bathing rooms.

CW standard pipe

Wheatland Tube's SureThread is the new name of the company's continuous weld (CW) standard pipe product. The SureThread name echoes the hot-formed, uniform grain, which makes this pipe extremely strong, yet easily machinable. Although the name is new, Wheatland Tube has used this same manufacturing process since 1931.

Flexible foam shower track

Sterling introduces ComforTrack Technology — a flexible bottom track that supports the shower door's glide and yields an easier, safer day-to-day use for the family. ComforTrack's cushioned threshold bends to applied pressure, allowing the user to kneel, sit or lean on the track, making it easier and more comfortable to bathe a child or a pet, access the shower or clean the bathing/showering space. That track also features a low profile and sleek shape that is easy to keep clean. ComforTrack is featured on Sterling's Prevail shower doors.

Electric mini tank

The Eemax electric mini tank can save the wait for hot water to reach a faucet. Simply tap into the hot water line and install the heater directly at the sink for instantaneous hot water. There is also no need for costly recirculating lines and pumps. These units are lightweight, compact and plug into a standard 120-volt outlet. Sizes include: 1, 2.5, 4 and 6 gal. The mini tank is wall- or floor-mountable, has a glass-lined tank for longer life and quick recovery time.

Straight copper stub-outs

Aquatherm's polypropylene-random piping systems feature a straight, threadless transition from PP-R pipe to copper-sweated connections. With straight Aquatherm-to-copper stub-outs — which come in 1/2", 3/4" and 1" diameters and are 11", 11", 18" long respectively — installers can easily transition to a fan-coil unit, zone valve, heat pump or other HVAC components with sweated connections using PP-R. It is mold-injected PP-R and is connected via heat fusion. The copper portion is connected using standard copper solder joints or compression fittings.

Luxury tub and basin

Victoria + Albert's Amiata Collection is the outcome of a collaboration between the British brand and Italian design house Meneghello Paoletti Associates. Crafted from Victoria + Albert's signature Englishcast composition — a naturally white material rich in volcanic limestone that is warm to the touch and hand finished — the tub will never crack or flex, is highly durable and easy to clean. It measures 64 1/4" long, 31 1/2" wide and 24" deep. The coordinated Amiata 60 basin mirrors the tub and measures 23 5/8" long by 16 1/4" wide by 6 1/8" deep.
