Liberty Pumps Introduces the ASCENT II Macerating Toilet

The new Ascent II macerating toilet system from Liberty Pumps allows easy installation of a bathroom in areas where no gravity sewer lines may exist! Perfect for remodeling applications, the Ascent II eliminates the need for major construction or breaking concrete floors in basements to add a bathroom. Featuring a 1.28 GPF (4.8 LPF) high efficiency toilet, the system easily macerates sewage waste and other debris with new RazorCut™ technology and then discharges it through a small 1" diameter line up to 25 feet (7.6 meters) high and 150 feet (46 meters) horizontally.

With tens of thousands of cycles and months of testing in a commercial installation, the RazorCut™ system easily handled sanitary napkins, paper towels and other difficult solids with ease.

Lenova Introduces Cobblestone Green Onyx Sink

A gem is defined as a stone that is beautiful, rare and durable. Lenova's new Cobblestone Green Onyx bath sink epitomizes all these attributes and more. The sink sparkles with translucent layers of rich green onyx creating a bath fixture that embodies fine style.

Each individual Onyx Sink is crafted by a masterstone mason. The intricate process begins by using centuries-old cobblestone for the outside of the vessel. The cobblestone shell is then skillfully hollowed out to form a bowl. Using a food-safe, knife-grade epoxy, rich green onyx chips are adhered to the bowl's interior in an artful, mosaic pattern.

KWC Introduces SIN Kitchen Faucet Series

Created by Michael Lammel of the NOADesignStudio in Aachen, Germany, the new KWC SIN kitchen faucet series offers four different, ADA-compliant models built on the same basic pedestal shape that is reminiscent of the classic Bordeaux bottle. Combining stylish design with functional versatility to suit different tastes and work requirements in the modern American kitchen, each model can be swiveled through 360 degrees, permitting the greatest possible freedom of movement.

Kohler Introduces HydroRail Shower Column

Enjoying a serene spa experience beneath a rain shower with the added luxury of a handshower has long required much planning and expensive installation of plumbing behind the wall. Kohler Co. debuts a budget-friendly alternative: the Hydro-Rail, an external shower column that combines two of the most popular custom shower upgrades in one product.

A simple-to-operate diverter at the bottom of the column adds to the ergonomic functionality for the entire family, and a slidebar bracket allows the bather to customize the water delivery height, ideal for those wanting to shower without wetting their hair, or for younger bathers.

Gerber Introduces the Brianne Suite

The Brianne Suite™ by Gerber is now offered with a high efficiency compact elongated toilet (HET), serves as the company's third HET addition in 2012.

Featuring a Fluid-master Fill Valve and a dual feed jet for optimal flushing performance, the Brianne HET uses only 1.28 gallons of water per flush (gpf), and is pending WaterSense® certification.

Designed with space in mind, the compact design of the Brianne 1.28 HET is the recommended seat height in accordance with the American Disabilities Act (ADA) standards. This toilet is ideal for small spaces and is available with an elongated bowl and 12-inch rough-in options.
