

QUICKDRAIN USA REVOLUTIONIZES THE SHOWER PAN.

**By Engineering an Environmentally Conscious
Sloped Foam Pan for their Linear Shower Drains.**

(Frisco, CO. October 21, 2015) Once again, QuickDrain USA has revolutionized the way we shower by engineering the only recycled sloped shower pan on the market. The brand's ShowerLine pans are made of 100% post Consumer recycled plastic.

Not only is the material revolutionary but its just one of the many selling features of this remarkable shower pan. These shower pans are suitable for both interior and exterior use and can be used with both sheet and liquid topical waterproofing. A remodeler's dream, these shower pans are easier and faster installation to install because they eliminate the need for traditional mud bed installation, as the 2% slope has been incorporated into the panel.

The QuickSlope system comes in a wide variety of sizes for efficient on site installation. It is offered in six standard sizes: 32", 40", 48", 56", 64", and 72", with an interlocking design that can be quickly and easily modified to any size or shape of on-site conditions.

Made up of 350 16oz recycled PET (Water and Soda Bottles) that could have ended up in a landfill, these shower pans are ideal for residential showers and the hospitality, healthcare and commercial markets. PET (Polyethylene-Terephthalate) is widely known and familiar to consumers in the form of PET bottles. Yet this is only one area of applications for this lightweight recyclable thermoplastic.

PET is a thermoplastic by nature and hence can be processed repeatedly. The plastic is REACH compliant, ROHS compliant, recyclable, and contains no CFCs, fibers, heavy metals, carcinogens and mutagens. Moreover, PET is an excellent insulation material and offers good protection against moisture and condensation. It does not rot or mold. This patented foam is strong yet lightweight, non-reactive, economical, and shatterproof.

About QuickDrain USA

QuickDrain USA is a premier manufacturer of stainless steel, and PVC low profile channel drainage systems for showers and wet areas. The company is providing drain solutions to high-end hotel chains, large metropolitan hospitals and everyday homeowners who are looking for a universal drainage system with beauty, function and affordability rolled into one easy-to-install product. All of the company's products are designed to meet Uniform Plumbing Code and International Plumbing Code standards and approvals.
