Counterflow cooling tower

Marley MD Everest:

- Counterflow cooling tower
- Fast installation
- Low drift rate

Marley MD Everest counterflow cooling tower for a wide range of applications, is said to deliver more than 85% more cooling capacity compared with other preassembled counterflow towers. To facilitate faster installation and safer assembly processes, the tower arrives at a site in modules that are pre-constructed in a controlled factory environment. The structure meets seismic and wind load requirements according to ASCE and IBC building codes. Marley mechanical components include a five-yr. maintenance-free System 5 Marley Geareducer gear drive; energy-efficient, low-clog PVC heat-exchange fill media; and Motor Outside Airstream. At 2,500 tons, the tower can be adapted to varying water quality using a range of fill types. It reportedly achieves a low drift rate, to 0.0005% of circulating water flow, so less water escapes the tower.

Industrial fans

The XP HVLS fan line is said to deliver efficient performance with a featherweight design and includes a streamlined plug-n-play, pre-assembled installation that does not require any guy-wires. Available in five sizes—including 7-, 8-, 10-, 12-, and 14-ft. dia. models—the line has a direct-drive motor for quiet operation. Accompanied by a 2-ft. rigid mount, the fans also have 110-V input and variable speed control for fully adjustable airflow.
