HIGH-EFFICIENCY CONDENSING BOILER LINE

The Weil-McLain high-efficiency 95% AFUE Evergreen condensing boiler is available for light-commercial or residential applications in six convenient sizes: 70, 110, 155, 220, 299 and 399 MBH. The Evergreen features a durable stainless steel fire-tube heat exchanger, simple controls with advanced multifunction flexibility, a guided setup wizard for easy installation and 10 built-in heating system presets for setup and maintenance. It also features an easy-to-understand graphical user interface, the ability to cascade two to eight boilers together and ZoneStacking up to 24 programmable zones with no external panel required.

SOLDERING AND AIR TEST EQUIPMENT

Adevco's Cobra-Tech tool is for soldering and air-testing piping systems. The connection is provided by sealing the inside of the pipe by using a rubber gasket, eliminating the need for additional fittings. Its unique design relieves pressure when soldering, so as not to have the contractor wait for the entire system to drain. Its patented design also allows for a quick adaptation of a pressure gauge, which allows the contractor to perform pressure testing on new or existing copper, black, galvanized and PEX piping systems. It is available in 1/2" to 6" pipe sizes.

POINT-REPAIR KIT FOR PIPE REHAB

HammerHead Trenchless, a Charles Machine Works Co., introduces a sectional point repair system for rehabilitating sewer and storm water pipe with circular or oval cross-sections 3" to 60" in diameter. It is a cost-effective, environmentally friendly cured-in-place-pipe point or sectional repair solution available in custom kits based on customers' specific project requirements, HammerHead Trenchless notes. The kit offers plumbers and other contractors the benefit of a longer working time with a shorter cure time. The resin is odor-free, styrene-free, VOC-free and presents no hazards to the environment or human health.

CONCEALED SHOWER SETS

Victoria + Albert adds a brand-new line of concealed shower sets to its product lineup. The company released four collections of concealed shower sets, each with its own distinctive style that neatly hides pipework behind shower walls. The concealed shower sets are available in a selection of the company's most popular designs, including the Florin collection (pictured), the contemporary Tubo collection, the traditional Staffordshire collection and the new Soriano collection with its stainless steel construction. Each of the new concealed shower sets includes a bath spout, handheld shower, fixed showerhead and a two-way diverter control with thermostatic concealed two-way valve. Finish options include polished chrome, polished nickel, brushed nickel and an unlacquered brass.

FREESTANDING TUB MODELS

MTI Baths has two new tub models that fit perfectly in a 66" alcove, making commercial remodeling easier, it states. The new version of the Alissa freestanding oval bathtub features an integral pedestal and integrated slotted overflow. The model 231 measures 64 5/8" long by 33 1/2" wide by 21 5/8" tall. The new Elise 230 model (pictured) features a rimless aesthetic and also has a small footprint to fit tight spaces. Both are offered in white or biscuit, matte finish and can be ordered as a soaking tub or as a therapeutic air bath. They are constructed of the company's signature one-piece SculptureStone material; which is nonporous and stain, mold and mildew-resistant, making cleaning and maintenance easy, MTI adds.
